# How can we help you?

## The problem you face

ESG (Environmental, Social & Governance) is fast becoming a strategic element of operating a business. Companies are required to respond to increasingly complex ESG-related requests from various stakeholders, disclose a growing amount of ESG information and report in increasingly detailed formats.

However, accurately **measuring your ESG performance is not easy**. It requires specialist skills across a broad range of topics and is out of reach for most companies.

## The solution we provide

A software platform to automate ESG Assessment and Reporting.

# Because it's important...and not easy

- ✓ ESG is important  
ESG is now a 'must have' element of any company's strategy and operations structure
- ✓ It applies to your company too  
Knowing where one stands with regards to sustainability is not only a requirement for large, listed organizations, but for all.
- ✓ Need to consider all aspects  
Measuring environmental sustainability, diversity or CSR alone is not enough. Companies need to consider all ESG dimensions, together.
- ✗ Assessments can be daunting  
Most tools are either too simplistic, overly complex or they focus on just one aspect (i.e. carbon footprint, CSR or supply chain)
- ✗ Reporting is complicated  
Multiple or conflicting standards, approaches and methods can cause confusion when deciding how to assess your status
- ✗ Few companies have expertise  
Only a few companies truly have the in-house expertise to measure their ESG performance, with many unaware of how they can do it.

Our technology helps companies of all sizes *simply, quickly, securely & accurately* assess their ESG performance.

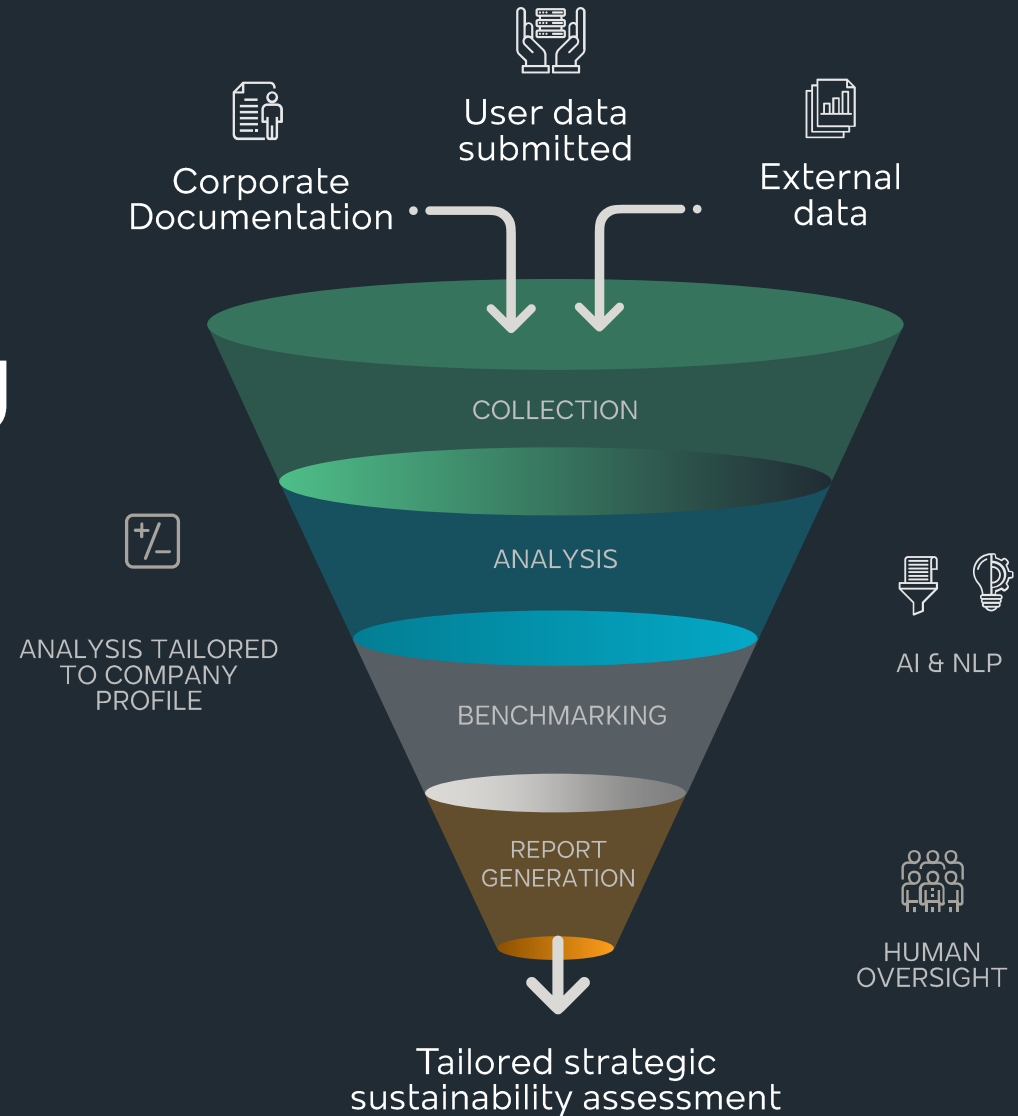

How does it  
**work?**

# Automated ESG Analysis and Reporting

## OUR DATA-LED ANALYSIS APPROACH

We apply advanced technology to extract ESG data from your corporate data and documents.

We combine your internal data with ESG-related external data available about your company.

# What do we need from you?

Basic company information and corporate data and documents

## Basic information

We will need to know a few things about your company in order to tailor the analysis.

## Corporate documentation

In order for us to do the analysis, you will need to upload as much corporate data and documents as possible to our secure servers.

# What does your assessment report include?

Full assessment across 360 KPIs.  
We identify highlights & lowlights
